Randy Widialaksono *Computer Systems Engineer*

https://codify.dev • r[at]codify.dev

Summary

Experience in software development and hardware design from processor architecture to physical implementation. Knowledge of computer architecture, FPGA/ASIC/VLSI, computer science, and machine learning fundamentals.

Experience

Intel — Austin, Texas

SoC Performance Architect — *2017-present*
Provide workload performance at power analysis/workload projections for upcoming Xeon server SoCs.
Improved team efficiency and productivity through modeling and developing tools/automation.
Enhanced SoC modeling simulator capabilities, features, integration across tools/simulators (C++/SystemC).
Conducted pre-silicon SoC performance tuning, analysis, and validation – interconnect/memory systems.

Design Automation Engineer — *2016-2017*
Provide timing, place/route solutions to deliver CPU physical implementation up to successful SoC tape-in.

Qualcomm Research — San Diego, California

Research Intern — *Summer 2013*
Performed mixed-signal circuit design verification, post-silicon measurements, and FPGA prototyping.

Skills

Software/Programming	Machine Learning/Data Science	ASIC Design/SoC Performance
Advanced **C++** and **Python**	**PyTorch**, Scikit-learn, Pandas ETL	SystemC, Platform Architect, Simics
Tcl, Java, Clojure, Unix, SQL, Node.js	Git, Docker, Spark, Dash, Streamlit	RTL Design: SystemVerilog/Verilog
Shell scripting, HTML, Javascript	XGBoost, Regressions, Efficient ML	Place-Route, DFT, Timing, DRC/LVS

Select Publications/Awards

A Logic-on-logic 3D-stacked Heterogeneous Multi-core Processor.. IEEE ICCD 2017.
Physical Design of a 3D-stacked Heterogeneous Multi-core Processor. IEEE 3D-IC 2016.
Ranked 34th in USA, IEEExtreme 24-hour Programming Competition, 2014. Team of 2.
Best FPGA Implementation at International LSI Design Contest, Japan 2009. Xilinx Award. Team of 3.

Education

North Carolina State University — Raleigh, North Carolina

Ph.D. in Computer Engineering — *3.98/4.0. 2016*
Dissertation: Three-Dimensional Integration of Heterogeneous Multi-Core Processors.
Research team built a functional 3D-IC processor chip. Developed custom 3D-IC physical implementation flow.
Performed architecture analysis, verification, and entire RTL-GDS2 back-end flow up to deliverable layout.
Teaching Assistant (graduate-level): Design of Digital Systems, Computer Design & Technology.

Software Engineering	Advanced Microarchitecture	ASIC Design	Electronic Sys. Level Design
Computer Networks	Parallel Computer Arch.	ASIC Verification	Physical Design
Memory Systems	Computer Design & Tech.	IC Technology & Fabrication	VLSI Systems Design
Embedded Systems Design	Digital Electronics	Modern Comp. Algebra-AU	VLSI System Testing (Duke U.)

Duke University — Durham, North Carolina

Visiting Scholar: coursework, research collaboration — *2013*

Bandung Institute of Technology — Indonesia

B.S. in Electrical Engineering (Computer Engineering track), with distinction — *2009*
Thesis: C implementation neural network and Kohonen SOM, training/inference, floating/fixed point, on a multi-core Parallax microcontroller. TA: Digital Systems, Microprocessor Lab.

Oita University — Japan

Exchange Student, Research & Coursework — *2007-2008*
Implemented control of panning camera using neural networks (C). Used a neural network to track face location relative to center and provide control commands to the camera.

Project Experience

Machine Learning

PyTorch: Integrated and analyzed model quantization coupled with feedback alignment training algorithm (open-source libraries).

Experimented on developing custom learning algorithms (back-propagation algorithm alternatives), e.g binarized neural network with greedy training approach.

Benchmarking of MobileNet, SqueezeNet quantized/non-quantized models on Android using TensorFlow Lite.

Silicon Implementation / Tape-outs

Successful academic tape-out (functional 3D-IC processor chip) of a heterogeneous multi-core processor system with thread migration features at NCSU. Processor implementation has two stacked dies of 5.25 mm x 5.25 mm on a 130 nm process.

RTL Design, FPGA Prototyping

Implemented "Sokoban" (moving box puzzle game) on FPGA: coded the game in MIPS assembly by hand (prototyped in C). Wrote MIPS processor RTL from scratch (team effort, 1 GHz clock in a commercial 180 nm process). Wrote the Verilog code to interface with FPGA buttons and render VGA graphics. Created game sprites.

Memory Systems

Performed modelling and performance comparison between ideal and non-ideal block placement policy for multi-core systems. Cache block placement policy: requestor core cache vs remote core cache. Analyzed experiment results from running SPEC2K benchmarks in SIMICS.

ESL & Physical Design

Performed TLM & ESL modelling of an SoC design that consists of an ARM Cortex core, DRAM model, and AMBA bus. Performed physical design optimizations, signal integrity analysis, power analysis, timing analysis. Tools: SystemC, Mentor Graphics Vista, Catapult, Python, C++, UML, Encounter, Primetime.

Parallel Computer Architecture

Implemented a MSI, MESI, MOESI cache coherence protocols simulator in C++.

Explored cache coherence protocols to reduce off-chip memory accesses.

Computer Design and Technology

Implemented a generic cache simulator, branch target buffer simulator, and Tomasulo superscalar processsor simulator in C++.

Implemented a checkpoint recovery mechanism for large fetch window processor within SimpleScalar simulator environment in C++.

Advanced Microarchitecture

Implemented and compared thread migration strategies within SimpleScalar simulator in C++.

ASIC Verification

Verified an out-of-order superscalar core (FabScalar) for tape-out, found design bugs in load-store unit and issue queue. Created a reusable SystemVerilog testbench executed in QuestaSim.

Digital Electronics

Designed a low power Hybrid Latch Flip-flop in academic 45 nm tech library. Operating clock frequency 4GHz, power consumption 19.9 uW, setup time 13.5ps, hold time 86ps, t_{DQ} of 63.64 ps.

Designed a voltage-mode and current-mode differential transmitter circuit. Tools: HSPICE.

VLSI Systems Design

Designed a full-custom 3x3 arbiter-crossbar CMOS unit, 2nd best performance and energy*delay-squared metric out of 27 teams. Customized power delivery network and clock tree design. Created custom standard cell library and top-level integration. Achieved 5.5 GHz clock frequency, 0.19 nW power, with FreePDK45 technology library. Tools: Cadence Virtuoso, HSPICE, Calibre DRC-LFD.

ASIC Design

Implemented a Viterbi Decoder in RTL Verilog. Optimized throughput and delay per unit area metric by designing a fast floating point unit, using dual port memory, and pipelining.

Online Courses

Startup Engineering (Coursera), Analysis of Algorithms, Scalable Machine Learning (edX).
